Evaluating Managed Mental Health Services

- Leonard Bickman 2004-05-31

Based on a five-year evaluation of an \$80 million U.S. Army demonstration program, this first-of-its kind study explores the cost effectiveness of a managed care model of service delivery for children and adolescents with mental health and substance addiction problems. Contributions report on the quality, cost, and clinical outcome and raise critical questions about the effectiveness of mental health services and their

delivery in community settings. Chapters describe new approaches to measurement and provide analyses assisting future research on managed care.

Clinical Practice Guidelines We Can Trust -

Institute of Medicine 2011-06-16

Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700

guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review--guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. Clinical Practice Guidelines We Can Trust shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are

relevant to the individual patient encounter, instead of implementing a one size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.

The International System for Serous Fluid Cytopathology - Ashish Chandra 2020-11-05

This book is the culmination of an international effort to bring consistency and diagnostic efficiency to effusion cytology for the sake of patient care. The authors recognize special challenges in serous fluid cytopathology, such as reporting the presence of Mullerian epithelium in peritoneal fluids. What is an appropriate serous fluid volume to ensure adequacy? How should mesothelial proliferations be reported and is it appropriate to make an interpretation of malignant mesothelioma? How specific should a report be regarding the origin and subtyping of tumors found in serous fluids? What are the appropriate quality monitors for this specimen type? Special chapters on considerations for peritoneal washings, cytopreparatory techniques, mesothelioma and quality management are included to address these

issues. The text contains literature reviews that elucidate existing evidence in support of current practices and recommendations. Expert opinions on where evidence was lacking, the most common practices were adopted by consensus, and where there was no commonality, are employed. Written by experts in the field, The International System for Serous Fluid Cytopathology serves as a collaborative effort between the International Academy of Cytology and the American Society for Cytopathology and calls upon participation of the international cytopathology and oncology communities to contribute to the development of a truly international system for reporting serous fluid cytology

Heroin Addiction and The British System -

Michael Gossop 2004-08-02

The British system of dealing with drug addiction is notable for its flexibility and its capacity to adapt to changing circumstances. Because of this it has attracted considerable international interest, although it is rarely fully understood or accurately represented. Presenting a comprehensive account of the development of policies and treatments, Heroin

Addiction brings together the perspectives of policy makers, practitioners and social commentators. The book contributes to a proper understanding of how policy and practice has evolved so that lessons for future policy and practice may be identified. Volume II of Heroin Addiction charts the development and use of treatment and policy responses in the UK, highlighting the limitations of these approaches as well as their achievements. It is a unique source of reference for students, researchers, healthcare professionals and drug agencies both in the UK and overseas.
