## **Classic Honda Motorcycles** - Bill Silver 2012

Classic Honda Motorcycles presents an overview of Honda motorcycles produced from 1958 through 1990, including iconic models such as the CB77 Super Hawk, CB92 Benly, Dream, CB750 and many others. Enthusiasts will find a bounty of useful and interesting information about which bikes are likely to suit an individual rider's needs, which models are most collectible and how to find parts for rare Honda motorcycles. *Metal Matrix Composites in Industry* - Alexander Evans 2013-11-27 Metal matrix composites are making tangible inroads into the "real" world of engineering. They are used in engineering components such as brake rotors, aircraft parts, combustion engines, and heat sinks for electronic systems. Yet, outside a relatively limited circle of specialists, these materials are mostly unknown. Designers do not as a rule think of using these materials, in part because access to information is difficult as these materials have not really entered engineering handbooks. Metal Matrix Composites in Industry is thus useful to engineers who wish to gain introductory knowledge of these materials and who want to know where "to find" them. Additionally, it provides researchers and academics with a survey of current industrial activity in this area of technology.

*Soft and Fragile Matter* - Michael E. Cates 2000-01-01

Covering colloids, polymers, surfactant phases, emulsions, and granular media, *Soft and Fragile Matter: Nonequilibrium Dynamics, Metastability and Flow* (PBK) provides self-contained and pedagogical coverage of the rapidly advancing field of systems driven out of equilibrium, with a strong emphasis on unifying conceptual principles rather than material-specific details. Written by internationally recognized experts, the book contains introductions at the level of a graduate course in soft condensed matter and statistical physics to the following areas: experimental techniques, polymers, rheology, colloids, computer simulation, surfactants, phase separation kinetics, driven systems, structural glasses, slow dynamics, and granular materials. These topics lead to a range of exciting applications at the forefront of current research, including microplasticity of emulsions, sequence design of copolymers, branched polymer dynamics, nucleation kinetics in colloids, multiscale modeling, flow-induced surfactant textures, fluid demixing under shear, two-time correlation functions, chaotic sedimentation dynamics, and sound propagation in powders. Balancing theory, simulation, and experiment, this broadly-based, pedagogical account of a rapidly developing field is an excellent compendium for graduate students and researchers in condensed matter physics, materials science, and physical chemistry.

"Most of the research on multinationals has focused on companies from developed markets. Research on multinationals from emerging economies is relatively new and most of the attention has been focused on multinationals from Asia. Little research has been done on the internationalization strategies and challenges of Latin American multinationals. This book aims to fill this void. Studying Latin American multinationals will not only provide insights into specific strategies deployed by successful firms but will also identify best practices that can be employed by the next generation multinationals from emerging markets." --Book Jacket.
