Violence and Mental Health - Jutta Lindert 2015-02-25

Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

Drawings on a Bus - Ellsworth Kelly 2007

Ellsworth Kelly made the drawings reproduced in this volume in the Fall of 1954. Published for the first time in this sketchbook facsimile, these drawings offer a rare and special glimpse into the distinguished artist's working process at the dawn of his career. The inspiration for the drawings in Sketchbook 23 came to the artist while riding a bus. Inspired by the shadows cast across the pages of a book, the artist took out his pencil and quickly recorded the outlines of the shadows directly onto the pages. Upon returning to his studio, Kelly reached for a sketchbook and began developing the sketches in ink, experimenting with variations, cropping and layering the shadow forms to generate new ones. These black and white drawings became the source material for larger works, including some of the artist's most celebrated canvases, such as *Atlantic* (1956) purchased by the Whitney Museum of American Art in 1957, the first work by Kelly to enter a museum collection.

Stochastic Filtering Theory - G. Kallianpur 2013-04-17

This book is based on a seminar given at the University of California at Los Angeles in the Spring of 1975. The choice of topics reflects my interests at the time and the needs of the students taking the course. Initially the lectures were written up for publication in the Lecture Notes series. However, when I accepted Professor A. V. Balakrishnan's invitation to publish them in the Springer series on Applications of Mathematics it became necessary to alter the informal and often abridged style of the notes and to rewrite or expand much of the original manuscript so as to make the book as self-contained as possible. Even so, no attempt has been made to write a comprehensive treatise on filtering theory, and the book still follows the original plan of the lectures. While this book was in preparation, the two-volume English translation of the work by R. S. Liptser and A. N. Shiryaev has appeared in this series. The first volume and the present book have the same approach to the subject, viz. that of martingale theory. Liptser and Shiryaev go into greater detail in the discussion of statistical applications and also consider interpolation and extrapolation as well as filtering.

Dalit Households in Village Economies - V. K. Ramachandran 2014 Caste is an institution of oppression and social discrimination specific to South Asia, more so to India. Central to the caste system were the status assigned to the Dalit people and the criminal practice of untouchability. Caste is embedded in production relations. It is an impediment to the growth of the productive forces, and a bulwark against the revolutionary overthrow of the ruling classes. Although there have been, in recent years, new scholarship and new attempts to understand the socio-economic conditions of life of Dalit people and households in India, it is still true, as a leading scholar in the field has written, that 'very few empirical studies have tried to study the phenomenon of economic discrimination'. This book is an attempt to contribute to the study and understanding of economic deprivation and exclusion among Dalits in rural India. The first section deals with poverty and group discrimination. The second section has case studies - from Kerala, Tamil Nadu and West Bengal - on historical aspects of land, caste and social exclusion. The third section deals with contemporary fieldwork-based economic

analyses from Tamil Nadu and Maharashtra. The last section has studies of Dalit households in village economies; the empirical base for these studies comes from the village-level data archive of the Project on Agrarian Relations (PARI) being conducted by the Foundation for Agrarian Studies. The articles in the book are evidence, in some cases, of direct discrimination, and in others of what has been described as differential impact discrimination. Most of all, they reflect cumulative discrimination and disadvantage.

Data Analysis in Astronomy - V. di Gesù 2012-12-06

The international Workshop on "Data Analysis in Astronomy" was intended to give a presentation of experiences that have been acquired in data analysis and image processing, developments and applications that are steadily growing up in Astronomy. The quality and the quantity of ground and satellite observations require more sophisticated data analysis methods and better computational tools. The Workshop has reviewed the present state of the art, explored new methods and discussed a wide range of applications. The topics which have been selected have covered the main fields of interest for data analysis in Astronomy. The Workshop has been focused on the methods used and their significant applications. Results which gave a major contribution to the physical interpretation of the data have been stressed in the presentations. Attention has been devoted to the description of operational system for data analysis in astronomy. The success of the meeting has been the results of the coordinated effort of several people from the organizers to those who presented a contribution and/or took part in the discussion. We wish to thank the members of the Workshop scientific committee Prof. M. Cappacioli, Prof. G. De Biase, Prof. G. Sedmak, Prof. A. Zichichi and of the local organizing committee Dr. R. Buccheri and Dr. M.C. Macca rone together with Miss P. Savalli and Dr. A. Gabriele of the E. Majorana Center for their support and the unvaluable part in arranging the Workshop.

Cyber Rights - Mike Godwin 2003-06-20

A first-person account of the fight to preserve First Amendment rights in the digital age. Lawyer and writer Mike Godwin has been at the forefront of the struggle to preserve freedom of speech on the Internet. In *Cyber Rights* he recounts the major cases and issues in which he was involved and offers his views on free speech and other constitutional rights in the digital age. Godwin shows how the law and the Constitution apply, or should apply, in cyberspace and defends the Net against those who would damage it for their own purposes. Godwin details events and phenomena that have shaped our understanding of rights in cyberspace—including early antihacker fears that colored law enforcement activities in the early 1990s, the struggle between the Church of Scientology and its critics on the Net, disputes about protecting copyrighted works on the Net, and what he calls "the great cyberporn panic." That panic, he shows, laid bare the plans of those hoping to use our children in an effort to impose a new censorship regime on what otherwise could be the most liberating communications medium the world has seen. Most important, Godwin shows how anyone—not just lawyers, journalists, policy makers, and the rich and well connected—can use the Net to hold media and political institutions accountable and to ensure that the truth is known.

Apple II/IIe/IIc Expansion Guide - Gary Phillips 1985

Quantum Isometry Groups - Debashish Goswami 2017-01-05

This book offers an up-to-date overview of the recently proposed theory of quantum isometry groups. Written by the founders, it is the first book to present the research on the "quantum isometry group", highlighting the interaction of noncommutative geometry and quantum groups, which

is a noncommutative generalization of the notion of group of isometry of a classical Riemannian manifold. The motivation for this generalization is the importance of isometry groups in both mathematics and physics. The framework consists of Alain Connes' "noncommutative geometry" and the operator-algebraic theory of "quantum groups". The authors prove the existence of quantum isometry group for noncommutative manifolds given by spectral triples under mild conditions and discuss a number of methods for computing them. One of the most striking and profound findings is the non-existence of non-classical quantum isometry groups for arbitrary classical connected compact manifolds and, by using this, the authors explicitly describe quantum isometry groups of most of the noncommutative manifolds studied in the literature. Some physical motivations and possible applications are also discussed.

Explorations in Applied Geography - ASHOK K. DUTT 2008-02-21

Applied geography, a new frontier in geographic discipline, distinguishes itself from other branches of geography through the application of geographical knowledge and its techniques in solving practical problems of the land and the environment. *Explorations in Applied Geography* is a felicitation volume in honour of Professor L.R. Singh, Department of Geography, University of Allahabad, who has established his international credentials as a leading exponent of Applied Geography. He considers public policy to be one of the applications of applied geographic principles, since many problems facing society today have a geographical dimension. To Professor L.R. Singh, Applied Geography is the strategy of the trinity of men, space and resources which need to be harmonized in advancing human well-being. This volume, contributed by geographers of eminence within the country and from other parts of the globe, focuses on the following thrust areas: • Natural and environmental hazards • Environmental change and management • Challenges of the human environment • Application of techniques of spatial analysis In a nutshell, the book emphasizes the important proactive role that the Applied Geography must play in the formulation of public policies and programmes for sustainable human development. This comprehensive and classic compendium will not only be useful to post-graduate students in geography but also provide new vistas in geographic research.

Fading Shadows - Leslie Walter LeRoy 1973

The mountain region of Western Colorado in 1860, was disturbed from deep slumber with the rediscovery of rich deposits of gold and silver. Mining towns and camps of every size and description were born in the valleys and on the slopes. Prospectors of diversified background searched for precious metals in veins and in stream gravels. Hopes and fortunes were won and lost; living conditions were severe and uncertain. Disease, hunger, accidents, and inadequate medical care promoted cemetery growth. Today, scattered throughout the mountains, are many fascinating relics (ghosts) of these early times--collapsed log cabins, headframes, cable-tram towers, foundations of homes and mills, rusted equipment, abandoned wagon trails and railroad grades, ochreous mine dumps, tunnels, and mill trailings. These relics are rapidly fading into oblivion because of vandalism, fire, snowslides, floods, and normal progressive decay. The next 100 years will claim all except those preserved in museums. To place on photographic record as of 1974 some of these relics, is the objective of Fading Shadows. --from the book jacket.

Principles of Asynchronous Circuit Design - Jens Sparsø 2013-04-17

Principles of Asynchronous Circuit Design - A Systems Perspective addresses the need for an introductory text on asynchronous circuit design. Part I is an 8-chapter tutorial which addresses the most important issues for the beginner, including how to think about asynchronous systems. Part II is a 4-chapter introduction to Balsa, a freely-available synthesis system for asynchronous circuits which will enable the reader to get hands-on experience of designing high-level asynchronous systems. Part III offers a number of examples of state-of-the-art asynchronous systems to illustrate what can be built using asynchronous techniques. The examples range from a complete commercial smart card chip to complex microprocessors. The objective in writing this book has been to enable industrial designers with a background in conventional (clocked) design to be able to understand asynchronous design sufficiently to assess what it has to offer and whether it might be advantageous in their next design task.
