Artificiality and Sustainability in Entrepreneurship - Richard Adams 2022-10-29

This open access edited volume explores the past, present, and future of artificiality and sustainability in entrepreneurship - the unforeseen consequences and ways to advance to a sustainable future. In particular, it connects artificiality, sustainability and entrepreneurship, intertwining artificial with the specific phenomenon of those novel digital technologies that provoke continuous and significant change in our lives and business. Unlike digital entrepreneurship research, which focuses on digital technology development and management, this book covers processes and mechanisms of sustainable adaptability of entrepreneurs, the business logic of start-ups, and the collaborative behaviours under

the mass digital transformation, including the prevalence of artificial intelligence. Some of the questions that this book answers are as follows: How has entrepreneurship reacted to such challenges previously? What lessons have been learned and need to be carried forward? How can entrepreneurship and the artefacts of entrepreneurship respond to current challenges? What should be the mindset of the entrepreneur to assure sustainable adaptation? How to embrace and embed the new business logic?

Shaping the Sierra - Timothy P. Duane 1999-06-30

The rural west is at a crossroads, and the Sierra Nevada is at the center of this social and economic change. The Sierra Nevada landscape has always been valued for its bounty of natural resource commodities, but new residents and an ever-growing flood of tourists to the area have

transformed the relationship between the region's nature and its culture. In an engaging narrative that melds the personal with the professional, Timothy P. Duane—who grew up in the area—documents the impact of rapid population growth on the culture, economy, and ecology of the Sierra Nevada since the late 1960s. He also recommends innovative policies for mitigating the negative effects of future population growth in this spectacular but threatened region, as well as throughout the rural west. Today, the primary social and economic values of the Sierra Nevada landscape are in the amenities and ecological services provided by its wildlands and functioning ecosystems. Duane shows how further unfettered population growth threatens the very values which have made the Sierra Nevada a desirable place to live and work. A new approach to land use planning, resource management, and local economic development—one that recognizes the emerging values of the landscape—is necessary in order to achieve sustainable development, Duane claims. Weaving personal experience with outstanding scholarship, he shows how such an approach must explicitly recognize the importance of values and the application of an environmental land ethic to future development in the area.

Together, the questions and ideas offered these chapters generate a path forward for a thoughtful and nuanced view of D&I in future organizational science. In spite and because of their critiques of the status quo, the scholars and scholarship highlighted here provide hope for positive change.

All For One - Andrew Sobel 2009-04-20

Corporate clients are demanding more value from their external advisors, and consolidating their business around a smaller number of firms. These trends are forcing a variety of service providers—from consulting firms to large banks—to confront a series of difficult challenges: How do we create an 'all-for-one, one-for-all' culture in which the whole is greater than the sum-of-the-parts and we succeed in leveraging our global network to deliver value to clients?" How do we mobilize the right people, resources, and ideas—across a multitude of organizational and geographic boundaries—into each and every client relationship?" How do we evolve from a trusted advisor to a trusted partner and build multi-year, institutional relationships? All for One answers these questions with an innovative and comprehensive model for developing enduring, institutional client relationships—what Andrew Sobel refers to as Level 6 Trusted Client Partnerships. It offers readers ten specific strategies that are thoroughly supported by case studies, best practices from leading firms, and implementation tools. The individual professional is principally responsible for five of these strategies, while the firm—the institution—must support and drive the other five. When you successfully execute against all ten of these building blocks, you develop long-term, professional-client partnerships that provide great value to the client and high levels of personal satisfaction and profitability for the service provider.

The Secretaries of State, 1681-1782. - Mark A. Thomson 2019-05-29

Published in 1968: While giving a lucid account of the functions and difficulties of the office of Principal Secretary, the author shows clearly how the retention of this position was a characteristic example of the English habit of clinging to old forms in political matters long after these forms have ceased to bear any relationship to reality. Originally a clerk in the King's private household and writer of his letters, by the end of the seventeenth century the position had become a political office, second only in importance to that of Lord High Treasurer.

[The Future of the Professions](#) - Richard Susskind 2022-03-31

This book predicts the decline of today's professions and introduces the people and systems that will replace them. In an internet-enhanced society, according to Richard Susskind and Daniel Susskind, we will neither need nor want doctors, teachers, accountants, architects, the clergy, consultants, lawyers, and many others, to work as they did in the 20th century. The Future of the Professions explains how increasingly capable technologies - from telepresence to artificial intelligence - will place the 'practical expertise' of the finest specialists at the fingertips of everyone, often at no or low cost and without face-to-face interaction. The authors challenge the 'grand bargain' - the arrangement that grants various monopolies to today's professionals. They argue that our current professions are antiquated, opaque and no longer affordable, and that the expertise of their best is enjoyed only by a few. In their place, they propose five new models for producing and distributing expertise in society. The book raises profound policy issues, not least about employment (they envisage a new generation of 'open-collared workers') and about control over online expertise (they warn of new 'gatekeepers') - in an era when machines become more capable than human beings at most tasks. With a new preface exploring recent critical developments, this updated edition builds on the authors' groundbreaking research into more than a dozen professions. Illustrated with numerous examples from each, this is the first book to assess and question the relevance of the professions in the 21st century.
