Impact of the Global Medical Supply Chain on SNS Operations and Communications - National Academies of Sciences, Engineering, and Medicine 2018-09-03

The Centers for Disease Control and Prevention (CDC) established the Strategic National Stockpile (SNS) with a focus on procuring and managing medical countermeasures (MCM) designed to address chemical, biological, radiological, and nuclear events and attacks by weapons of mass destruction. The stockpile is a repository of antibiotics, chemical antidotes, antitoxins, vaccines, antiviral drugs, and other medical materiel organized to respond to a spectrum of public health threats. Over time, the mission of the SNS has informally evolved to address other large-scale catastrophes, such as hurricanes or outbreaks of pandemic disease, and rare acute events, such as earthquakes or terror attacks. When disaster strikes, states can request deployment of SNS assets to augment resources available to state, local, tribal, or territorial public health agencies. CDC works with federal, state, and local health officials to identify and address their specific needs and,

according to the stated mission of the SNS, ensure that the right resources reach the right place at the right time. On August 28, 2017, the National Academies of Sciences, Engineering, and Medicine convened a workshop to explore the current state of the global medical supply chain as it relates to SNS assets, and the role of communications in mitigating supply chain risks and in enhancing the resilience of MCM distribution efforts. This publication summarizes the presentations and discussions from the workshop.

Supply Chain Strategy - Edward H. Frazelle 2001-10-16

High-Tech and High-Touch Logistics Solutions for Supply Chain

Challenges In today's fast-paced and customer-oriented business environment, superior supply chain performance is a prerequisite to getting and staying competitive. Supply Chain Strategy is based on world-class logistics practices in place in successful supply chain organizations, the latest academic breakthroughs in logistics system design, and the logic of logistics. It presents the proven pillars of success in logistics and supply chain management. Part of McGraw-Hill's Logistics Management Library, Supply Chain Strategy is organized according to author Dr. Ed Frazelle's breakthrough logistics master planning methodology. The methodology leads to metrics, process designs, system designs, and organizational strategies for total supply chain management, total logistics management, customer response, inventory planning and management, supply, transportation, and warehousing. Concise yet complete, Dr. Frazelle's book shows how to develop a comprehensive logistics and supply chain strategy, one that will both complement and support a company's strategic objectives and long-term success. Logistics the flow of material, information, and money between consumers and suppliers has become a key boardroom topic. It is the subject of cover features in business publications from Wall Street Journal to BusinessWeek. Annual global logistics expenditures exceed \$3.5 trillion, nearly 20 percent of the world's GDP, making logistics perhaps the last frontier for major corporations to significantly increase shareholder and customer value. And at the heart of every effort to improve organizational logistics performance? Supply chain efficiency. Supply Chain Strategy is today's most comprehensive resource for up-to-the-minute thinking and practices on developing supply chain strategies that support a company's overall objectives. Covering world-class practices and systems, taken from the files of Coca-Cola, Wal-Mart, General Electric, and other companies, it covers essential supply chain

subjects including: Logistics data mining for identifying the root cause of material and information flow problems, pinpointing opportunities for process improvements, and providing an objective basis for project-team decision making Inventory planning and management presenting metrics, processes, and systems for forecasting, demand planning, and inventory control, yielding lower inventory levels and improved customer service Logistics information systems and Web-based logistics helping to substitute information for inventory and work content Transportation and distribution for connecting sourcing locations with customers at the lowest cost by, among other things, leveraging private and third-party transportation systems Logistics organization development including the seven disciplines that link enterprises across the supply chain, as well as logistics activities within those enterprises Supply Chain Strategy explains and demonstrates how decision makers can use today's technology to enhance key logistics systems at every point in the supply chain, from the time an idea or product is conceived through its delivery to the final user. It describes the major steps in developing an effective, workable logistics management program one that will reduce operating expenses, minimize capital investment, and improve overall customer service and satisfaction.

Trade and Transport Facilitation Assessment - World Bank 2010-06-24 The 'Trade and Transport Facilitation Assessment' (TTFA) is a tool for identifying inefficiencies in international supply chains that limit a country's ability to compete in international trade. The TTFA examines problems that affect not only exports competitiveness, but also the ability to import and distribute inputs to production and consumer goods. This new TTFA toolkit was developed to meet the growing demand for facilitation and logistics reforms in an environment of increasing global competition and expanded trade in intermediate goods. It reflects practical experience and the change in the nature of demand from developing countries. The TTFA focuses on simplification and harmonization of trade-related procedures and identifies the opportunities for improving logistics services, infrastructure, and the overall performance of specific supply chains. It also outlines practices to

develop plans of action with proper interactions with government agencies and stakeholders.

[The Logistics Outsourcing Handbook](#) - Jo Godsmark 2019-12-03

For any business involved in today's supply chains, logistics services are critical. Logistics Competencies, Skills, and Training - Alan McKinnon 2017-09-01

Despite the spread of automation and new supply chain management paradigms, logistics remains dependent on a rather specific set of skills and competencies, whether for managerial, administrative, or blue-collar jobs, such as trucking or warehousing. This dependence implies that the logistical performance of businesses, industries, and nation states is strongly influenced by the quantity and quality of the workforce. Insufficient resources of a competent and properly trained workforce in logistics adversely affect the quality of service, reduce productivity in sectors dependent on logistics, and ultimately reduce trade competitiveness. While other interventions that affect logistics performance—such as international infrastructures, trade corridors, regulations, and services—have already been reviewed extensively, this report is the first to cover the contributions of human resources and explore how to develop skills and improve competencies, especially in developing countries. The study proposes a framework for the skills needed according to the logistics activity (such as transportation or warehousing) or the type and level of responsibility. Based on several sources, including recent surveys carried out by the World Bank and the Kühne Logistics University, the report uncovers where the skills constraints are according to the type of job or countries. Findings include that logistics is an industry struggling to hire skilled workers, although with differences between developed countries (where trucker shortages are more acute) and developing economies (where managerial shortages are more widespread). Typically, blue-collar logistics jobs have lower status and lower pay than blue-collar jobs in other industries; they are thus less attractive for skilled workers. In developing countries with a potentially available workforce, lack of vocational preparation for

careers in logistics means that less-skilled workers are not easily re-skilled. Logistics tasks at the upper end of the occupational hierarchy and those with high information technology content often require an upskilling of employees to keep pace with new technology. Yet the problem is not confined to recruitment. The surveys point to limited resources, money, and staff time allocated to training, especially in developing countries. Realizing the promise of quality jobs from the growth of logistics worldwide requires a coordinated effort by logistics companies, professional associations, training providers, and policy makers. Through a combination of facilitation, regulation, advice, financial instruments, and land use planning, governments can exert significant influence.

The Logistics Advantage - Hugo Soto 2019-10-27

As a supply chain specialist having worked both Oil & Gas as well as Technology, I've seen a lot of people walking out of college into entry level jobs with steep learning curves. I have witnessed small companies make sizable mistakes, and large companies struggle with constant logistics problems. The Logistics Advantage is a book that I have composed to shorten the learning curve of fresh out of college students entering the field, to help small business owners trying to better themselves, and to help out industry professionals trying to get a better understanding in the field of logistics as it is still a difficult concept to master for most businesses. One thing that sets apart The Logistics Advantage from other logistics or supply chain books, is that this book approaches logistics as a set of common-sense guidelines that cut down the learning curves and helps avoid costly amateur mistakes. I start the book with a few notes on building a mindset suited for logistics and encouraging personal development of crucial skills useful to logisticians, then I drill down into some more technical aspects of the field of transportation.
