"This unique Fast Fact serves as a quick resource for

foundational, relevant data, knowledge, and vital information, not only about the nature of medical errors, but why they occur. More importantly, Hunt shows us how to comprehensively address problems: highlighting the need for both academic and clinical professional development, emphasizing approaches, as theory-informed practices; acknowledging importance of human caring, power, relationship, and such practices as mindful presence" —Jean Watson, PhD, RN, AHN-BC, FAAN, LL(AAN) Founder, Watson Caring Science Institute Distinguished Professor/Dean Emerita, University of Colorado Denver

This practical resource helps nurses develop the skills they need to avoid medical errors and promote patient safety. Based on the most current research and guidance from principal scientific/academic boards, the text identifies the most significant errors and their causes and describes how nurses can develop and improve critical thinking, logic,

and clinical judgement to improve patient outcomes. This book presents an overview of common preventable issues and their causes, including medication errors, patient falls, pressure ulcers, infections, and surgical errors. It focuses on strategies for becoming a safe practitioner through education and competency development, while highlighting major national safety initiatives with improved outcomes. Bariatric Surgery in Clinical Practice - David Haslam
2022-09-25

The book is needed for several reasons. Bariatric surgery is one of the most clinically effective and cost effective services in any field of medicine, and is growing in popularity, and the non-specialist family practitioner, allied health professional and

pharmacist need to know exactly what it involves. Bariatric surgery is in everyone's interest - whether medic or patient, as it offers improvement in diabetes, heart disease, sleep apnoea, fatty liver and many cancers, whilst reducing benefits, housing costs and the general burden on the economy. There is a lot of flawed thinking on surgery in primary care, with only a minority of family practitioner specialists making the majority of referrals, whilst many are denying their patients access because of their own misconceived ideas. A 'back to basics' book will help tackle the negative views surrounding the topic, and improve the volume and quality of referrals. Very often patients turning up to obesity centres have been given poor advice, and inappropriate treatment, and arrive with little or no idea what to expect. Many medics prioritise other conditions first, overlooking the underlying cause, i.e. obesity. Basic education on obesity and co-morbidities is fast becoming

essential.
