Cross-Language Information Retrieval and Evaluation - Carol Peters 2003-06-29

The first evaluation campaign of the Cross-Language Evaluation Forum (CLEF) for European languages was held from January to September 2000. The campaign culminated in a two-day workshop in Lisbon, Portugal, 21-22 September, immediately following the fourth European Conference on Digital Libraries (ECDL 2000). The first day of the workshop was open to anyone interested in the area of Cross-Language Information Retrieval (CLIR) and addressed the topic of CLIR system evaluation. The goal was to identify the actual contribution of evaluation to system development and to determine what could be done in the future to stimulate progress. The second day was restricted to participants in the CLEF 2000 evaluation campaign and to their experiments. This volume constitutes the proceedings of the workshop and provides a record of the campaign. CLEF is currently an activity of the DELOS Network of Excellence for Digital Libraries, funded by the EC Information Society Technologies to further research in digital library technologies. The activity is organized in collaboration with the US National Institute of Standards and Technology (NIST). The support of DELOS and NIST in the running of the evaluation campaign is gratefully acknowledged. I should also like to thank the other members of the Workshop Steering Committee for their assistance in the organization of this event.

*Intelligent Agents VIII* - John-Jules C. Meyer 2002-06-19

This volume is the eighth in the Intelligent Agents series associated with the ATAL workshops. These workshops on "Agent Theories, Architectures, and Languages" have established themselves as a tradition, and play the role of small but internationally well-known conferences on the subject, where besides theory per se also integration of theory and practice is in focus. Specifically, ATAL addresses issues of theories of agency, software architectures for intelligent agents, methodologies and programming languages for realizing agents, and software tools for applying and evaluating agent-based systems. ATAL 2001 featured two special tracks in which both the more theoretical / formal and the more practical aspects were present, viz. "Formal Theories of Negotiation", organized by Frank Dignum, and "Agents for Hand-Held, Mobile, or Embedded Devices", organized by Tim Finin. There was also an extra session on RoboCup Rescue, organized and presented by Satoshi Tadokoro and Ranjit Nair. ATAL 2001 attracted 68 papers from over 20 countries all over the world, of which 30 were selected for presentation at the workshop and publication in this volume. We invited two outstanding speakers: Fausto Giunchiglia (Trento, Italy) and Tom Dean (Brown, USA).

*Children with Hearing Loss* - Elizabeth B. Cole 2019-07-22

The fourth edition of *Children With Hearing Loss: Developing Listening and Talking, Birth to Six* is a dynamic compilation of important information for the facilitation of spoken language for infants and young children with hearing loss. This text covers current and up-to-date information about auditory brain development, listening scenarios, auditory technologies, spoken language development, and intervention for young children with hearing loss whose parents have chosen to have them learn to listen and talk. The book is divided into two parts. Part I, Audiological and Technological Foundations of Auditory Brain Development, consists of the first five chapters that lay the foundation for brain-based listening and talking. These chapters include neurological development and discussions of ear anatomy and physiology, pathologies that cause hearing loss, audiological testing of infants and children, and the latest in amplification technologies. Part II, Developmental, Family-Focused Instruction for Listening and Spoken Language Enrichment, includes the second five chapters on intervention: listening, talking, and communicating through the utilization of a developmental and preventative model that focuses on enriching the child's auditory brain centers. New to the Fourth Edition: \*All technology information has been updated as has information about neurophysiology. \*The reference list is exhaustive with the addition of the newest studies while maintaining seminal works about neurophysiology, technology, and listening and spoken language development. \*New artwork throughout the book illustrates key concepts of family-focused listening and spoken language intervention. This text is intended for undergraduate and graduate-level

training programs for professionals who work with children who have hearing loss and their families. This fourth edition is also directly relevant for parents, listening and spoken language specialists (LSLS Cert. AVT and LSLS Cert. AVEd), speech-language pathologists, audiologists, early childhood instructors, and teachers. In addition, much of the information in Chapters 1 through 5, and also Chapter 7 can be helpful to individuals of all ages who experience hearing loss, especially to newly diagnosed adults, as a practical "owner's manual."

**Reading and Writing Disorders in Different Orthographic Systems** - P. G. Aaron 1989-10-31

Even though Specific Reading Disability (Dyslexia) has been clinically recognized as a developmental learning disorder for nearly a hundred years. only within the past two decades it has become the subject of major experimental investigation. Because, by definition, dyslexic children are of average or superior intelligence. it is often suspected that some arcane feature of the written language is responsible for the inordinate difficulty experienced by these children in learning to read. The occasional claim that developmental dyslexia is virtually nonexistent in some languages coupled with the fact that languages differ in their writing systems has further rendered orthography a subject of serious investigation. The present Volume represents a collection of preliminary reports of investigations that explored the relationship between orthography and reading disabilities in different languages. Even though not explicitly stated. these reports are concerned with the question whether or not some orthographies are easier to learn to read and write than others. One dimension on which orthographies differ from each other is the kind of relationship they bear to pronunciation. The orthographies examined in this book range from the ones that have a simple one-to one grapheme-phoneme relationship to those which have a more complex relationship.

**The SAGE Encyclopedia of Contemporary Early Childhood Education** - Donna Couchenour 2016-03-15

The general public often views early childhood education as either simply "babysitting" or as preparation for later learning. Of course, both viewpoints are simplistic. Deep understanding of child development, best educational practices based on development, emergent curriculum, cultural competence and applications of family systems are necessary for high-quality early education. Highly effective early childhood education is rare in that it requires collaboration and transitions among a variety of systems for children from birth through eight years of age. The SAGE Encyclopedia of Contemporary Early Childhood Education presents in three comprehensive volumes advanced research, accurate practical applications of research, historical foundations and key facts from the field of contemporary early childhood education. Through approximately 425 entries, this work includes all areas of child development - physical, cognitive, language, social, emotional, aesthetic - as well as comprehensive review of best educational practices with young children, effective preparation for early childhood professionals and policy making practices, and addresses such questions as: · How is the field of early childhood education defined? · What are the roots of this field of study? · How is the history of early childhood education similar to yet different from the study of public education? · What are the major influences on understandings of best practices in early childhood education?

Heritage and School Language Literacy Development in Migrant Children - Raphael Berthele 2017-11-15

This book discusses literacy development in heritage language speakers and presents the results of four different quantitative studies that investigate the transfer of literacy skills in bi- and multilingual language development. The empirical studies focus on different populations of pupils, most of them located in various parts of Switzerland, and emphasise the potential residing in shared or transferred resources between their heritage languages and the languages spoken in the region to which their family has immigrated. The goal of all studies was to gain an understanding of the factors, both linguistic and non-linguistic in nature, that contribute to the development of language skills in both the heritage and school languages. Theoretical assumptions are put to the test via hypothesis testing and the generally shared assumptions on bilingual education are questioned based on the data. Furthermore, methodological problems in the investigation of linguistic interdependence are discussed. This book contributes to the scholarly investigation of potential beneficial effects in academic proficiency across languages in migrant children.

*A Guide to Language Testing* - Grant Henning 1987

*Historical Linguistics 1999* - Laurel J. Brinton 2001-08-09

This is a selection of papers from the 14th International Conference on Historical Linguistics held August 9-13, 1999, at the University of British Columbia. *Clinical Neuropsychology and the Psychological Care of Persons with Brain Disorders* - George P. Prigatano 2019-09-06

The administration of psychological care to persons with brain disorders requires a series of skills that integrate the knowledge of clinical neuropsychology with developmental psychology, psychotherapy, rehabilitation, and the study of the humanities. In *Clinical Neuropsychology and the Psychological Care of Persons with Brain Disorders*, Dr. Prigatano describes his approach to this complex topic. He reviews some of the defining characteristics of human nature, and blends that discussion with an understanding of how the brain normally develops and declines with age. The psychological struggles of people at each stage of development are further described as different brain disorders occur at different times in development.

*Word Morphology and Written Language Acquisition: Insights from Typical and Atypical Development in Different Orthographies* - Lynne G. Duncan 2019-06-05

This Research Topic explores the processing of morphemes, the smallest units of language that bear meaning and that combine to form more complex words. The articles gathered under this Research Topic investigate typical and atypical morphological processing by children and adolescents in ten different languages. These articles provide cross-linguistic and cross-script evidence of the early sensitivity of children to the morphemic structure of words, irrespective of whether they are struggling readers or typically developing. All in all, the collection allows for a better understanding of how morphological processing skills develop, providing valuable clues as to how this competence can be used as a tool to improve literacy acquisition in struggling readers.

*8th International Conference on Practical Applications of Computational Biology & Bioinformatics (PACBB 2014)* - Julio Saez-Rodriguez 2014-05-21

Biological and biomedical research are increasingly driven by experimental techniques that challenge our ability to analyse, process and extract meaningful knowledge from the underlying data. The impressive capabilities of next generation sequencing technologies, together with novel and ever evolving distinct types of omics data technologies, have put an increasingly complex set of challenges for the growing fields of Bioinformatics and Computational Biology. The analysis of the datasets produced and their integration call for new algorithms and approaches from fields such as Databases, Statistics, Data Mining, Machine Learning, Optimization, Computer Science and Artificial Intelligence. Clearly, Biology is more and more a science of information requiring tools from the computational sciences. In the last few years, we have seen the surge of a new generation of interdisciplinary scientists that have a strong background in the biological and computational sciences. In this context, the interaction of researchers from different scientific fields is, more than ever, of foremost importance boosting the research efforts in the field and contributing to the education of a new generation of Bioinformatics scientists. PACBB'14 contributes to this effort promoting this fruitful interaction. PACBB'14 technical program included 34 papers spanning many different sub-fields in Bioinformatics and Computational Biology. Therefore, the conference promotes the interaction of scientists from diverse research groups and with a distinct background such as computer scientists, mathematicians or biologists.

**Language Development from Birth to Three** - Moshe Anisfeld 1984

"This book presents a synthesis of two areas of research: infant cognition and early language development. It treats the development of language, which begins in the second year, as continuous with the development of the symbolic capacity, which takes place in the first year. The juxtaposition of the linguistic period with the prelinguistic period results in a sharper portrait of each of these periods. The aim of the book is to provide a sophisticated understanding of the development of symbols and language without requiring a background in the scientific study of children or language."--Preface, p.xi

**Agent-Oriented Software Engineering VIII** - Michael Luck 2008-04-29

Software architectures that contain many dynamically interacting components, each with its own thread of control, engaging in complex coordination protocols, are difficult to correctly and efficiently engineer.

Agent-oriented modelling techniques are important for the design and development of such applications. This book provides a diverse and interesting overview of the work that is currently being undertaken by a growing number of researchers in the area of Agent-Oriented Software Engineering. This volume constitutes the thoroughly refereed proceedings of the 8th International Workshop on Agent-Oriented Software Engineering, AOSE 2007, held in Honolulu, Hawaii in May 2007 as part of AAMAS 2007. The 16 revised full papers were carefully selected from numerous submissions during two rounds of reviewing and improvement. The volume contains the papers presented at the workshop, together with papers resulting from discussions on tools and platforms. The papers have been organized into four sections on: methodology and processes, interacting heterogeneous agents, system development issues, and tools and case studies.

**Conceptual Development** - Ellin Kofsky Scholnick 1999-04

This book examines a key issue in current cognitive theories - the nature of representation. Each chapter is characterized by attempts to frame hot topics in cognitive development within the landscape of current developmental theorizing and the past legacy of genetic epistemology. The chapters address four questions that are fundamental to any developmental line of inquiry: How should we represent the workings and contents of the mind? How does the child construct mental models during the course of development? What are the origins of these models? and What accounts for the novelties that are the products and producers of developmental change? These questions are situated in a historical context, Piagetian theory, and contemporary researchers attempt to trace how they draw upon, depart from, and transform the Piagetian legacy to revisit classic issues such as the child's awareness of the workings of mental life, the child's ability to represent the world, and the child's growing ability to process and learn from experience. The theoretical perspectives covered include constructivism, connectionism, theory-theory, information processing, dynamical systems, and social constructivist approaches. The research areas span imitation, mathematical reasoning, biological knowledge, language development, and theory of mind. Written by major contributors to the field, this work will be of interest to students and researchers wanting a brief but in-depth overview of the contemporary field of cognitive development.

*The Structure and Development of Self-Consciousness* - Dan Zahavi 2004-09-23

Self-consciousness is a topic of considerable importance to a variety of empirical and theoretical disciplines such as developmental and social psychology, cognitive neuroscience, psychiatry, and philosophy. This volume presents essays on self-consciousness by prominent psychologists, cognitive neurologists, and philosophers. Some of the topics included are the infants' sense of self and others, theory of mind, phenomenology of embodiment, neural mechanisms of action attribution, and hermeneutics of the self. A number of these essays argue in turn that empirical findings in developmental psychology, phenomenological analyses of embodiment, or studies of pathological self-experiences point to the existence of a type of self-consciousness that does not require any explicit I —thought or self-observation, but is more adequately described as a pre-reflective, embodied form of self-familiarity. The different contributions in the volume amply demonstrate that self-consciousness is a complex multifaceted phenomenon that calls for an integration of different complementary interdisciplinary perspectives. **Transactions on Aspect-Oriented Software Development VIII** - Shmuel Katz 2011-06-22

This volume, the 8th in the Transactions on Aspect-Oriented Software Development series, contains two regular submissions and a special section, consisting of five papers, on the industrial applications of aspect technology. The regular papers describe a framework for constructing aspect weavers, and patterns for reusable aspects. The special section begins with an invited contribution on how AspectJ is making its way from an exciting new hype topic to a valuable technology in enterprise computing. The remaining four papers each cover different industrial applications of aspect technology, which include a telecommunication platform, a framework for embedding user assistance in independently developed applications, a platform for digital publishing, and a framework for program code analysis and manipulation.

**Encyclopedia of Language Development** - Patricia J. Brooks 2014-03-28

The progression from newborn to sophisticated language user in just a few short years is often described as wonderful and miraculous. What are the biological, cognitive, and social underpinnings of this miracle? What major language development milestones occur in infancy? What methodologies do researchers employ in studying this progression? Why do some become adept at multiple languages while others face a lifelong struggle with just one? What accounts for declines in language proficiency, and how might such declines be moderated? Despite an abundance of textbooks, specialized monographs, and a couple of academic handbooks, there has been no encyclopedic reference work in this area--until now. The Encyclopedia of Language Development covers the breadth of theory and research on language development from birth through adulthood, as well as their practical application. Features: This affordable A-to-Z reference includes 200 articles that address such topic areas as theories and research tradition; biological perspectives; cognitive perspectives; family, peer, and social influences; bilingualism; special populations and disorders; and more. All articles (signed and authored by key figures in the field) conclude with cross reference links and suggestions for further reading. Appendices include a Resource Guide with annotated lists of classic books and articles, journals, associations, and web sites; a Glossary of specialized terms; and a Chronology offering an overview and history of the field. A thematic Reader's Guide groups related articles by broad topic areas as one handy search feature on the e-Reference platform, which includes a comprehensive index of search terms. Available in both print and electronic formats, Encyclopedia of Language Development is a must-have reference for researchers and is ideal for library reference or circulating collections.

**Declarative Agent Languages and Technologies VIII** - Andrea Omicini 2011-04-26

**Paths of Development in L1 and L2 acquisition** - Sharon Unsworth 2006-02-15

The main focus of generative language development research in recent decades has been the logical problem of language acquisition - how learners go beyond the input to acquire complex linguistic knowledge. This collection deals with the complementary issue of the developmental problem of language acquisition: How do learners move from one developmental stage to another and how and why do grammars develop in a certain fashion? Building on considerable previous research, the authors address both general and specific issues related to paths of development. These issues are tackled through considering studies of L1 and L2 children and L2 adults learning a range of languages including Dutch, English, French, German, Greek and Japanese.

This volume consists of selected papers from the 2009 meeting of the American Association for Corpus Linguistics. The chapters cover aspects of language use (usage-based accounts of morphology/syntax of English and Tok Pisin), language learning (corpus-based learning of English, syntactic development observable in a Learner Corpus of English, "core" vocabulary items for learners of English) and language documentation (a new and innovative usage-based frequency dictionary of English, proposals to broaden the traditional understanding of a corpus in various directions, e.g., constructing a corpus of the content of Japanese manga comics). Taken together, the thirteen chapters represent a good cross-section of strands of new work in corpus linguistics, as practised by international scholars working on English and other languages.

Complex Networks VIII - Bruno Gonçalves 2017-03-01

This book collects the works presented at the 8th International Conference on Complex Networks (CompleNet) 2017 in Dubrovnik, Croatia, on March 21-24, 2017. CompleNet aims at bringing together researchers and practitioners working in areas related to complex networks. The past two decades has witnessed an exponential increase in the number of publications within this field. From biological systems to computer science, from economic to social systems, complex networks are becoming pervasive in many fields of science. It is this interdisciplinary nature of complex networks that CompleNet aims at addressing. The last decades have seen the emergence of complex networks as the language with which a wide range of complex phenomena in fields as diverse as physics, computer science, and medicine (to name a few) can be properly described and understood. This book provides a view of the state-of-the-art in this dynamic field and covers topics such as network controllability, social structure, online behavior, recommendation systems, and network structure.

**Pragmatic Development in First Language Acquisition** - Danielle Matthews 2014-06-15

Pragmatic development is increasingly seen as the foundation stone of language acquisition more generally. From very early on, children demonstrate a strong desire to understand and be understood that motivates the acquisition of lexicon and grammar and enables ever more effective communication. In the 35 years since the first edited volume on the topic, a flourishing literature has reported on the broad set of skills that can be called pragmatic. This volume aims to bring that literature together in a digestible format. It provides a series of succinct review chapters on 19 key topics ranging from preverbal skills right up to irony and argumentative discourse. Each chapter equips the reader with an overview of current theories, key empirical findings and questions for new research. This valuable resource will be of interest to scholars of psychology, linguistics, speech therapy, and cognitive science.

Introduction to Language Development - Shelia M. Kennison 2013-07-18

There are between 4,000 and 6,000 languages remaining in the world and the characteristics of these languages vary widely. How could an infant born today master any language in the world, regardless of the language's characteristics? Shelia M. Kennison answers this question through a comprehensive introduction to language development, taking a unique perspective that spans the period before birth through old age. Introduction to Language Development offers in-depth discussions on key topics, including: the biological basis of language, perceptual development, grammatical development, development of lexical knowledge, social aspects of language, bilingualism, the effect of language on thought, cognitive processing in language production and comprehension, language-related delays and disorders, and language late in life.

**The Development of Language** - Jean Berko Gleason 1997-01-01
