[Glücksspiel](#) - Ihno Gebhardt 2018-01-09

Der europäische Glücksspielmarkt befindet sich seit knapp 20 Jahren im Umbruch. Der heftige Streit über dessen künftige Ausgestaltung ist durch zuwiderlaufende gesellschaftspolitische und ökonomische Interessen geprägt. In Deutschland prallen divergierende ordnungspolitische Vorstellungen von Bund und Ländern sowie von Glücksspielunternehmern, Sucht- und Verbraucherschützern aufeinander: Die föderale Staatsordnung mit einer Bundeszuständigkeit für das sog. gewerbliche Spiel einerseits (Spielautomaten) und der Länderzuständigkeit für das „echte“ Glücksspiel (Lotterien, Sportwetten, Spielbanken) andererseits hebt die Konfliktlinien besonders hervor. Die Länder haben mit dem im Jahre 2012 in Kraft getretenen Ersten Glücksspieländerungsstaatsvertrag den derzeit gültigen Rechtsrahmen gesetzt, der bereits für sich genommen den Anlass für zahlreiche gerichtliche Auseinandersetzungen bildet. Wie

die Voraufgabe erschöpft sich dieses Handbuch allerdings nicht in der Erörterung der facettenreichen glücksspielrechtlichen Aspekte. Vielmehr folgt es einem interdisziplinären Ansatz: Zahlreiche namhafte Wissenschaftler und Praktiker vermitteln dem Leser zumindest eine Idee von der geschichtlichen Dimension und der Bedeutung des Glücksspiels für den Einzelnen und die Gesellschaft insgesamt und geben einen Überblick über wesentliche ökonomische und soziologische Gesichtspunkte sowie die modernen Erkenntnisse der Glücksspielsuchtforschung und -therapie. Im Unterschied zur Voraufgabe enthält das Buch zudem Länderberichte der führenden Fachleute aus den Hot-Spots der Glücksspielbranche in Südostasien und in den USA. Die Herausgeber Der Jurist Ihno Gebhardt war Leiter der Glücksspielaufsicht im brandenburgischen Innenministerium, Federführer der Glücksspielreferenten der Länder, Mitglied der Bund-Länder-Kommission zur Bekämpfung des illegalen Glücksspiels und Mitglied des Fachbeirates Sucht der Länder gem. § 10 Abs. 2 GlüStV. In Fachkreisen gilt Gebhardt als Kapazität auf dem Gebiet des europäischen Glücksspielwesens. Stefan Korte ist Inhaber des Lehrstuhls für Öffentliches Recht, insbesondere Öffentliches Wirtschaftsrecht, an der TU Chemnitz. Er wurde mit einer Arbeit zum staatlichen Glücksspielwesen an der Universität Hamburg promoviert und hat darüber hinaus mehrfach im Bereich des gewerblichen Spielrechts und des Glücksspielrechts aus einem primär juristischen, aber zugleich auch wirtschaftswissenschaftlichen Blickwinkel publiziert.

The Economic Consequences of State Lotteries - Mary O. Borg 1991

Examining the economic impact and consequences of state lotteries, this book focuses on the efficiency and equity of state government revenue and expenditure policy. The authors offer an analysis of equity issues by studying the Illinois and Florida lotteries, and address efficiency considerations through an examination of six education-supporting lotteries and their allocation and administration of revenue. Among the other topics discussed are the effect of lottery taxes on other sources of revenue, whether lottery tickets are purchased at the expense of necessities, and possible policies for enhancing lotteries.

Building Economics: Theory and Practice - Rosalie Ruegg 2013-11-11

We no longer build buildings like we used to nor do we pay for them in the same way. Buildings today are no longer only shelter but are also life support systems, communication terminals, data manufacturing centers, and much more. Buildings are incredibly expensive tools that must be constantly adjusted to function efficiently. The economics of building has become as complex as its design. When buildings were shelter they lasted longer than their builders. The average gothic master mason lived 35 or 40 years. Cathedrals took 3 or 4 hundred years to build. Cost estimates were verified by great great grandchildren of the original designer. Today, creative economics has become as important as creative design and creative building. The client brings builder, contractor, architect, and facilities manager to account in their life time. The cost of building can therefore no longer be left to chance or act of god. Solutions are no longer as ingeniously simple as those proposed by a Florentine builder early in the 15th century. He proposed to center the dome of S. Maria del Fiore on a great mound of earth mixed with pennies. When the job was done street urchins would carry away

the dirt in their search for the pennies. This was a serious suggestion offered by an early construction manager before Brunelleschi solved the problem more sensibly.

The Economics of Foreign Aid - Hans Eysenck
2017-07-28

This book brings together for the first time in a single volume a complete survey of the theoretical foundations of economic aid policies and a critical analysis of aid programs and practices. The book focuses on the contributions of familiar economic growth models and other economic and social theories of development to foreign aid practices, and provides a broad and penetrating overview of the economics of foreign aid. At the macroanalytical level, the author investigates the savings constraint and the foreign exchange constraint approaches and the models employed for determining the quantity of external capital required for achieving growth goals under varying economic conditions in the recipient economies. The author examines other approaches to aid requirements (including the capital absorptive approach), analyzes debt service capacity, and reviews various debt cycle models. The nature and significance of indicators of economic performance are investigated, and both theoretical and practical policy issues relating to the employment of aid as a means of influencing domestic policies are analyzed. In his final chapter, the author applies his theoretical conclusions to the formulation of an integrated approach to foreign aid, encompassing the major foreign assistance problems faced today. A clear and comprehensive text for every student of development economics, as well as the most thorough reference of its kind for professional economists, the book, a volume in the Aldine Treatises in Modern Economics series, will be useful to all who are concerned with the analysis, development, and execution of aid programs.

Foreign Investment in the Petroleum and Mineral Industries - Raymond F. Mikesell
2013-10-18

Raymond F. Mikesell deals with sources of

conflict between private foreign investors and the governments of developing countries. He concludes that government ownership and control will expand and that foreign investors are most likely to become sellers of their special services rather than remain investors who act freely for the benefit of parent companies.

Petroleum Company Operations and Agreements in the Developing Countries - Raymond F.

Mikesell 2016-02-12

Originally published in 1984, this study focuses on petroleum agreements between non-OPEC LDCs with oil-importing LDCs and how issues such as high oil prices affect each country. The information presented in this study was drawn from interviews with petroleum officials in petroleum companies, petroleum ministries and unpublished documents such as contracts and focussing on case studies of countries such as Peru, Guatemala and Malaysia. This title will be of interest to students of environmental studies and economics.

Unholy Trinity - Richard Peet, PhD 2003-08

Our lives are all affected by three hugely powerful and well financed, but undemocratic, organizations: the International Monetary Fund, the World Bank and the World Trade Organization. These institutions share a common ideology. They aggressively promote "corporate" capitalism, neoliberalism, giving free rein to the interests of a small number of transnational corporations. This book presents the history and fundamental ideas of this economic ideology. Describing each member of the "unholy trinity," it shows how neoliberalism hijacked the IMF,

World Bank and WTO in relation to their global financial, development and trade management roles.

Tropical Deforestation - Jin-Bee Ooi 1993

This study addresses the now familiar problem of tropical deforestation from an unfamiliar angle. More specifically, the author focuses on the time factor in the natural regeneration of the tropical rain forest. He examines the economics and practical implications of the very long period of time needed for such forests to regrow, and concludes that the tyranny of time makes it unlikely that the process of deforestation in the tropical rain forest countries can be halted.
