Process Use in Theory, Research, and Practice - J. Bradley Cousins 2007 Conceptions of use are grounded within a common conception that use and influence can be traced to evaluation findings or to the knowledge outputs of evaluative activities. Yet a qualitatively different type of use and impact began to emerge from evaluation practice and research on it. This other sort of consequence -- process use -- appeared to be attributable to something wholly independent of evaluation findings, specifically, the activities or processes of evaluation as opposed to its products or outputs. This volume is a multifaceted exploration of process use; it includes methodological, empirical, and conceptual inquiries as well as rich narrative forays into the domain of evaluation practice.

Such a comprehensive approach serves to deepen understanding of process use as being pivotal in contemporary theory on evaluation consequences. This is the 116th volume of the Jossey-Bass quarterly report series *New Directions for Evaluation*, a publication of Jossey-Bass and the American Evaluation Association. The journal publishes empirical, methodological, and theoretical works on all aspects of evaluation.

Insights, Innovation, and Analytics for Optimal Customer Engagement - Nagaraj, Samala 2021-02-12

Engaging customers has become an effective strategy of marketers for improving customer-brand relationships as customer engagement is a perfect predictor of organic growth. **Managing School Districts for High
Performance** - Stacey Childress 2007

Managing School Districts for High Performance brings together more than twenty case studies and other readings that offer a powerful and transformative approach to advancing and sustaining the work of school improvement. At the center of this work is the concept of organizational coherence: aligning organizational design, human capital management, resource allocation, and accountability and performance improvement systems to support an overarching strategy. This central idea provides a valuable conceptual framework for current and future school leaders. The case studies presented in Managing School Districts for High Performance grow out of the Public Education Leadership Project (PELP), a unique partnership between the Harvard Business School, the Harvard Graduate School of Education, and a network of urban school districts. This rich array of cases explores the managerial challenges districts face as they seek to ensure rich learning opportunities and high achievement for all students across a system of schools. "This book of insightful case studies fills a void long felt by educational administrators in search of practical, real-world training tools. It will serve as a catalyst for the tough conversations district leaders need to have about achieving high-quality outcomes for all students. The Broad Center for the Management of School Systems has used many of these cases with great success, and we are excited that they are now compiled into a single collection." -- Dan Katzir, Managing Director, The Broad Foundation "This volume is not a treatise about how schools and districts should work. Rather, it provides a deep immersion in the real dilemmas

involved in advancing school district reform. Anyone who works through these cases cannot help but come away with a more informed vision for change, a more reflective orientation about the interrelationships among the multiple tasks involved, and a more prudent grasp of what it takes to educate all children to high academic standards. The course of study presented by Managing School Districts for High Performance should be required professional education for anyone charged with advancing a coherent agenda of school improvement in our diverse, demanding, and rapidly changing society." -- Anthony S. Bryk, Spencer Professor of Organizational Studies, Stanford University "This set of case studies offers practitioners, policymakers, and scholars the opportunity to learn from the collective wisdom and real-life experiences of educational leaders involved in systemic transformation. Implementing coherent reform strategies designed to improve and sustain student performance often takes place in a vacuum. As a former urban superintendent, I believe that these selected educational case studies provide a compelling forum for shared experiential teaching and learning." -- Arlene Ackerman, Christian A. Johnson Professor of Outstanding Educational Practice, Teachers College, Columbia University "This collaboration between the Harvard Business School and the Harvard Graduate School of Education provides a set of analytical tools to address the most complex and challenging issues facing urban public schools. The contemporary case studies document actual choices and constraints and point to patterns and similarities across organizations, from urban schools to corporate environments." -- Carol Johnson, Superintendent, Boston Public Schools Stacy Childress is a lecturer at Harvard Business School. Richard F. Elmore is the Gregory R. Anrig Professor of Educational Leadership at the Harvard Graduate School of Education. Allen S. Grossman is the MBA Class of 1957 Professor of Management Practice at Harvard Business School. Susan Moore Johnson is the Pforzheimer Professor of Teaching and Learning at the Harvard Graduate School of Education.

Teaching and Research in Contemporary Higher Education - Jung Cheol Shin

2013-07-19

This book discusses how teaching and research have been weighted differently in academia in 18 countries and one region, Hong Kong SAR, based on an international comparative study entitled the Changing Academic Profession (CAP). It addresses these issues using empirical evidence, the CAP data. Specifically, the focus is on how teaching and research are defined in each higher education system, how teaching and research are preferred and conducted by academics, and how academics are rewarded by their institution. Since the establishment of Berlin University in 1810, there has been

controversy on teaching and research as the primary functions of universities and academics. The controversy increased when Johns Hopkins University was established in 1876 with only graduate programs, and more recently with the release of the Carnegie Foundation report *Scholarship Reconsidered* by Ernest L. Boyer in 1990. Since the publication of *Scholarship Reconsidered* in 1990, higher education scholars and policymakers began to pay attention to the details of teaching and research activities, a kind of 'black box' because only individual academics know how they conduct teaching and research in their own contexts.
