Team of Teams - Gen. Stanley McChrystal 2015-05-12
From the New York Times bestselling author of *My Share of the Task and Leaders*, a manual for leaders looking to make their teams more adaptable, agile, and unified in the midst of change. When General

Stanley McChrystal took command of the Joint Special Operations Task Force in 2004, he quickly realized that conventional military tactics were failing. Al Qaeda in Iraq was a decentralized network that could move quickly, strike ruthlessly, then seemingly vanish into the local population. The allied forces had a huge advantage in numbers, equipment, and training—but none of that seemed to matter. To defeat Al Qaeda, they would have to combine the power of the world's mightiest military with the agility of the world's most fearsome terrorist network. They would have to become a "team of teams"—faster, flatter, and more flexible than ever. In *Team of Teams*, McChrystal and his colleagues show how the challenges they faced in Iraq can be relevant to countless businesses, nonprofits, and organizations today. In periods of unprecedented crisis, leaders need practical management practices that can scale to thousands of people—and fast. By giving small groups the freedom to experiment and share what they learn across the entire organization, teams can respond more quickly, communicate more freely, and make better and faster decisions. Drawing on compelling examples—from NASA to hospital emergency rooms—*Team of Teams* makes the case for merging the power of a large corporation with the agility of a small team to transform any organization.

How to Build Affordable Hot Rods - Tony Thacker 2020-12-01

Learn how to build an affordable hot rod following the advice of the masters! In *How to Build Affordable Hot Rods*, author and lifelong hot rod aficionado Tony Thacker takes you through the process of building a hot rod on a budget. Drawing on his own extensive experience of both buying and building rods, Thacker explores the good, the bad, and the ugly. The good was setting a land speed record at Bonneville, the bad was buying a rod from which the previous owner had "swapped out" the good engine, and the ugly--well, let's just not go there. *How to Build Affordable Hot Rods* includes extensive how-to sections that cover step-by-step chassis builds for Model A, 1932, and 1936 Fords, including front- and rear-end setups. The in-depth chassis builds are complimented with sections on powertrain choices, bodywork and roof chops, wheels and tires, and wiring and paint. Also included are chapters on interiors and the all-important details that individualize any project to ensure that it stands out from the rest. When Henry Ford introduced his beloved Model T, he unwittingly gave the average person the means to go racing. Prior to the T, racing was mostly a sport of the rich, but that changed with the Model T. Stripped of fenders and hopped up with speed parts, T speedsters ruled, and it wasn't long before enthusiasm on the track translated to the street and the term hot rod entered the vernacular. Of course, it didn't need to be a Ford (and still doesn't), but the easiest and therefore cheapest route to Hot Rod Boulevard is down the Ford road. The journey accelerated after World War II, as hot rodding boomed with the growth of speed shops, car shows, drag racing, talented and trained GIs returning home, and the launch of *Hot Rod* magazine to spread the gospel far and wide. More than 100 years after the original Model T, hot rodding remains alive and well in the Australasia, Europe, and (of course) its birthplace the US.

From Strength to Strength - Arthur C. Brooks 2022-02-15

The roadmap for finding purpose, meaning, and success as we age, from bestselling author, Harvard professor, and the Atlantic's happiness columnist Arthur Brooks. Many of us assume that the more successful we are, the less susceptible we become to the sense of professional and social irrelevance that often accompanies aging. But the truth is, the greater our achievements and our attachment to them, the more we notice our decline, and the more painful it is when it occurs. What can we do, starting now, to make our older years a time of happiness, purpose, and yes, success? At the height of his career at the age of 50, Arthur Brooks embarked on a seven-year journey to discover how to

transform his future from one of disappointment over waning abilities into an opportunity for progress. From Strength to Strength is the result, a practical roadmap for the rest of your life. Drawing on social science, philosophy, biography, theology, and eastern wisdom, as well as dozens of interviews with everyday men and women, Brooks shows us that true life success is well within our reach. By refocusing on certain priorities and habits that anyone can learn, such as deep wisdom, detachment from empty rewards, connection and service to others, and spiritual progress, we can set ourselves up for increased happiness. Read this book and you, too, can go from strength to strength.

Antistatic Sprays - National Aeronautics and Space Adm Nasa 2018-10-25

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

Matt Keegan: 1996 - Matt Keegan 2020-09-22

Matt Keegan interviews artists and commissions writing to reassess the 1990s as the moment when the Democratic Party abandoned its New Deal values and swung to the right In the wake of the Trump election, artist Matt Keegan (born 1976) began investigating the Democratic Party's shifts over recent decades. In the late '80s, members of the Democratic Leadership Council successfully moved the party's platform to the right by including a pro-business, pro-military, interventionist agenda, and downplaying social infrastructure as a calculated break from its New Deal-era foundation. This shift led to Bill Clinton's consecutive terms. 1996 captures this pivotal time in American politics and society through the experience of artists who completed their undergraduate

studies in that year and voted for Clinton, and others who were born in 1996 and voted for the first time in 2016. Essays focus on cultural and ideological shifts from that time, such as the 1994 Crime Bill, 1996 Immigration Act, the Telecommunications Act, the start of Fox News and beyond.

Zero to One - Peter Thiel 2014-09-16

#1 NEW YORK TIMES BESTSELLER • “This book delivers completely new and refreshing ideas on how to create value in the world.”—Mark Zuckerberg, CEO of Meta “Peter Thiel has built multiple breakthrough companies, and Zero to One shows how.”—Elon Musk, CEO of SpaceX and Tesla The great secret of our time is that there are still uncharted frontiers to explore and new inventions to create. In Zero to One, legendary entrepreneur and investor Peter Thiel shows how we can find singular ways to create those new things. Thiel begins with the contrarian premise that we live in an age of technological stagnation, even if we’re too distracted by shiny mobile devices to notice. Information technology has improved rapidly, but there is no reason why progress should be limited to computers or Silicon Valley. Progress can be achieved in any industry or area of business. It comes from the most important skill that every leader must master: learning to think for yourself. Doing what someone else already knows how to do takes the world from 1 to n, adding more of something familiar. But when you do something new, you go from 0 to 1. The next Bill Gates will not build an operating system. The next Larry Page or Sergey Brin won’t make a search engine. Tomorrow’s champions will not win by competing ruthlessly in today’s marketplace. They will escape competition altogether, because their businesses will be unique. Zero to One presents

at once an optimistic view of the future of progress in America and a new way of thinking about innovation: it starts by learning to ask the questions that lead you to find value in unexpected places.
