Pro PHP MVC - Chris Pitt 2012-12-09

Model View Controller (MVC) is becoming the definitive architecture of website development frameworks due to the stability, extensibility and predictability it lends to development. It is not just the primary separation of database, business logic and interface components, but includes a wide range of considerations for building high-performing, scalable and secure applications. Deciding which MVC framework best suits the project you are about to begin is one of the biggest challenges you'll face as a developer. If you are part of a team, this decision has probably already been made for you; but in any event, you'll need to know how (and why) the framework authors made it work the way it does. Pro PHP MVC looks at the building blocks that make any good MVC framework, and how they apply to PHP. It exposes all considerations that many developers take for granted when using a popular framework, and teaches you how to make the framework your own. Over the course of reading this book, you will learn the theoretical implications of the choices you would make when writing your own MVC framework, and how to put the pieces together in a cohesive package. We take a look at the highly modular Zend Framework—how to use its collection of loosely coupled classes to build a unified system. We also look at CakePHP, learning from its automated build system (Bakery) and

highly intuitive approach to rapid development. This book will lay bare all the secret parts of MVC for you.

The workbook's ****appendix is a resource dictionary with all the open-source free assets on the Internet.**** Each chapter guides you in [my decision/design process](<http://www.stephen-gose.com>) you see why I am choosing various business and software results -- all of this in well-commented source code so you can get it right away. In summary, you complete your own exciting game in your selected genre using the free open source Phaser JavaScript Gaming Framework and other JavaScript tools following this step-by-step workbook. Desvendando o CodeIgniter 4 - Jonathan Lamim Antunes 2020-10-23
O CodeIgniter é um framework para desenvolvimento de aplicações web utilizando a linguagem PHP, com o objetivo possibilitar maior agilidade através de um conjunto de bibliotecas nativas, compatibilidade com bibliotecas externas e uma estrutura de codificação propícia à produtividade e à alta performance. Uma de suas premissas é manter o processo de desenvolvimento flexível, permitindo estender e até mesmo substituir partes da estrutura base (core) do próprio framework. Neste livro, Jonathan Lamim apresenta a versão 4 do CodeIgniter. Ela está completamente reformulada, trazendo mais performance para as aplicações e para os processos de desenvolvimento. Além da nova estrutura de arquivos e codificação, o código do framework foi reescrito 100% em PHP 7, o que traz grandes melhorias de performance e até mesmo facilidades de codificação. Para você que quer um framework mais enxuto, com estrutura de codificação menos restritiva e flexibilidade de configuração, o CodeIgniter 4 é o ideal.

Getting started with CodeIgniter 4, master the basics of the PHP framework for beginners - Andrés Cruz

This book is for anyone who wants to build their first applications in CodeIgniter 4, this writing offers a step-by-step introduction to the framework, knowing the most relevant aspects of it and is focused above all on practice; It is assumed that the reader has knowledge and has developed in PHP and related technologies of the language, such as JavaScript, HTML and CSS, since, remember that to use any framework, you have to have the bases that support it, that is, your programming language. The book is aimed at those people who want to learn something new, learn about a framework that has very little documentation, who want to improve a skill in web development, who want to grow as a developer and who want to continue scaling their path with other frameworks superior to this one. As long as you meet at least some of the above considerations, this book is for you. Map This book has a total of 16 chapters and consists of explanations and practices.

Chapters: Chapter 1: This chapter is intended to explain the environment needed to develop in CodeIgniter 4. Chapter 2: We take the first steps with the frameworks, we will know the official website of the framework, installation forms and advantages of each one of them, we install the framework, we will know the initial aspects on how to run the framework, configure a database, create our first components, the use of migrations for table management and we will see several cases on how to work with them, we will work with the MVC and create each of these components that define it from scratch, routing and of course, finishing the chapter with the traditional CRUD for one of our entities. Chapter 3:

It is a practice for you, in which you have to create another CRUD; putting into practice everything seen in the first chapter. Chapter 4: You will know how to use the routes, grouped routes, their options and the different types. Chapter 5: We will know the use of the session and also of the flash session to save data and present it to the user. Chapter 6: You will learn to manage views in a reusable way. Chapter 7: We will see how to use a more modular scheme when defining controllers for each type of module. Chapter 8: We will know how to work with HTML forms and apply validations from the server side in CodeIgniter, knowing the types of validations, creating them and applying validations from the controller; to then finally show the errors by the view; we will also learn how to use helper functions in our forms. Chapter 9: We will learn more about models, some properties that we can define in them, the use of functions and common example cases. Chapter 10: We will learn to use filters to intercept requests; as a practical case, we will create an authentication module with login for our application in which we will protect the management module or dashboard. Chapter 11: In this chapter we build a Rest Api type CRUD that can be consumed with JSON or XML; being CRUD type operations and working mainly from the server side; it will be a process similar to the CRUD that we created in Chapter 2, but with some variations that are typical of this type of structure. Chapter 12: In this chapter you will learn to generate test data with seeders which are ideal for when we are starting to develop. Chapter 13: In this chapter we will learn how to handle the relational schema of the database in CodeIgniter; we will look at one-to-many and many-to-many relationships. Chapter 14: In this chapter we are going to work with uploading files in our application, to upload images to our movie model. Chapter 15: This chapter provides an introduction to the use of the libraries and help functions and how to use them. Chapter 16: In this chapter we will learn how to integrate the PayPal platform in CodeIgniter, in order to process payments directly from the application. By the end of the book, you will have the knowledge to create any basic application with the framework and know more than just the basics of it. I invite you to visit my website: desarrollolibre.net And get to know my

work.

Panduan Lengkap Membangun Sistem Monitoring Kinerja Mahasiswa Internship Berbasis Web Dan Global Positioning System - Muhammad Yusril Helmi Setyawan, Aip Suprpto Munari 2020-03-31

Buku ini memberi petunjuk bagi yang ingin belajar membangun sebuah aplikasi berbasis web dengan bahasa pemrograman php. Dari buku tersebut menjelaskan membangun sebuah aplikasi dari proses instalasi

serta konfigurasi tools yang digunakan. Aplikasi yang dibangun pada buku ini mengambil topik monitoring yang bersangkutan dengan kinerja mahasiswa internship pada Perguruan Tinggi Swasta di Bandung. Program internship merupakan program yang dikhususkan bagi mahasiswa yang telah memiliki (knowledge) Program Studi D4 Teknik Informatika. Dalam kegiatan tersebut ada keterkaitan mengenai data laporan yang masih menggunakan cara konvensional. Dengan adanya perkembangan saat ini komputer menjadi alat bantu pekerjaan, dimana hampir semua pekerjaan bergantung pada alat ini, tidak hanya itu komputer dapat digunakan untuk membantu kegiatan internship lebih tepatnya dalam mendaftarkan laporan kegiatan mahasiswa di Politeknik Pos Indonesia. Keakuratan data sangat dibutuhkan untuk mengetahui hasil kinerja, oleh karena itu komputer sangat dibutuhkan dalam membantu kegiatan mahasiswa/i internship dalam sebuah perguruan tinggi. Aplikasi monitoring kinerja mahasiswa/i internship ini menggunakan bahasa pemrograman Framework CI (CodeIgniter) dan MySQL sebagai basisdatanya, Visual Studio Code sebagai aplikasi text editor, serta UML (Unified Modeling Language). Aplikasi ini merupakan aplikasi berbentuk web, kemudian diterapkan oleh objek yang membutuhkan. Dengan pengimplementasian sistem informasi monitoring ke dalam komputer, dapat menghasilkan beberapa manfaat seperti kecepatan pemrosesan informasi dan keefektifan laporan sehingga data lebih baik dan meringankan pembimbing menangani masalah data kinerja mahasiswa. Karena adanya fitur monitoring dan perhitungan jarak dengan algoritma harvesine formula sehingga pembimbing bisa melihat serta menghitung pergerakan mahasiswa/i pada saat mengunggah laporan sesuai posisi dimana objek berada dan sebagai acuan untuk data kehadiran, apabila mahasiswa/i melebihi jarak yang ditentukan maka pembimbing bisa menilai secara objektif. Sistem informasi ini dapat diterapkan dalam kegiatan tersebut, mengingat dimana laporan kinerja menjadi sebuah keterkaitan bagi kegiatan internship terutama dalam pengisian report

activity harian yang dapat dimanipulasi jika menggunakan cara manual. *Enhancing PHP Coding with CodeIgniter* - Dr. Poornima G. Naik
