Fashion Industry Copes with Covid-19. A Legal, Technological and Sociological Reflection -

Marlena Jankowska 2021-04-26

The SARS-CoV-2 virus pandemic has halted the global economy and forced its reorganization on many levels. This phenomenon caused a shock, the effects of which will be felt for a long time both on the micro and macro scale. Creative industries, including the fashion and design industries (Textile, Clothing, Leather, and Footwear, TCLF) that are the subject of this publication, are struggling to maintain normal levels of production, employment, financial liquidity. They must additionally confront new challenges in the areas of intellectual property rights and their approach to the e-commerce world. Businesses found themselves faced with an uncertain future and new obstacles, but also with opportunities. These challenges now affect the traditionally fastpaced fashion sector, which has been driven for many years by consumers' desire for ever more design and by the industry's own thirst for profit. In the Polish perspective, it should also be borne in mind that, according to the report of PKO Bank Polski in 2019, the clothing industry in Poland showed an upward trend, ranking the country in 8th place in Europe by size of the clothing sector in 2017. As for the entrepreneurs making clothing, in 2017 there were 12,700 of them, placing Poland third in Europe. Finally, for employment, in the same year in Poland, 85,000 were employed in the clothing sector, which was the 5th place in the European ranking. These statistics clearly demonstrate why this sector requires closer analysis in these changed times, including a refreshed SWOT analysis taking account of the new reality. Given this situation, the Center for Design, Fashion and Advertising Law of the University of Silesia initiated research to determine how the clothing sector in Poland is coping and how the legal environment interacts with the Covid challenges. Thanks to a joint effort of scientists and legal practitioners, this publication was created consisting of 39 chapters grouped into the following 12 parts:

Social and legal context, International and regulatory context, Product safety, Contracts, Copyright law, Design law and trademark law, Technology law, Unfair competition law, Labour law, Fine arts market, Sustainable Development, E-commerce. The editors would like to thank all of the authors for their efforts examining the development trends in the TCLF sector and for contributing the immeasurable amounts of energy and understanding that allowed us to complete this project. This book is the result of the authors' significant commitment. Editors would like to give special thanks to Śląski Holding Przemysłowy that shared the company's expertise about their two large industrial production plants employing over 500 employees, which kept working in a continuous operation system, without a single case of infection by COVID-19. We are grateful to the institutions that undertook honorary patronage of our initiative. Words of thanks go also to the strategic, content and media partners. The premiere of the publication will take place in conjunction with a music premiere, details of which can be found on the cover.

Fused Deposition Modeling of Composite Materials - Antonella Sola 2022-09-14

Fused Deposition Modeling of Composite Materials is dedicated to the field of 3D-printing of composite materials using a popular technique called Fused Deposition Modeling (FDM), the world's most popular 3D printing method. But this method is currently limited to printing basic polymers and only a handful of primitive composite materials. Many future industries, such as Space, Biomed, Construction and Defense are waiting for the ability to 3D print composites and new functional materials with complex shapes and features so they can add unique and customizable features to their parts, including biocompatibility, radiation shielding, high-strength, rapid cooling, flexibility and shape-memory. The book's authors take the reader through the basics of what the FDM technique is all about and describe the advantages and new opportunities arising from 3D printing innovative materials, which include polymer-matrix composites and fully inorganic parts. They then review and discuss methods for making the different types of composite feedstock filaments needed to 3D print such materials by FDM. Finally, sections discuss the challenges that should be considered in making filaments and parts and how to go about solving them. Covers the 3D printing of composite materials Includes comprehensive coverage of this new and emerging technology Written in a clear, practical and informative style, with numerous illustrations Contains case study examples taken from cutting-edge scientific literature

The New Global Rulers - Tim Büthe 2013-07-21

Over the past two decades, governments have delegated extensive regulatory authority to international private-sector organizations. This internationalization and privatization of rule making has been motivated not only by the economic benefits of common rules for global markets, but also by the realization that government regulators often lack the expertise and resources to deal with increasingly complex and urgent regulatory tasks. The New Global Rulers examines who writes the rules in international private organizations, as well as who wins, who loses--and why. Tim Büthe and Walter Mattli examine three powerful global private regulators: the International Accounting Standards Board, which develops financial reporting rules used by corporations in more than a hundred countries; and the International Organization for Standardization and the International Electrotechnical Commission, which account for 85 percent of all international product standards. Büthe and Mattli offer both a new framework for understanding global private regulation and detailed empirical analyses of such regulation based on multi-country, multi-industry

business surveys. They find that global rule making by technical experts is highly political, and that even though rule making has shifted to the international level, domestic institutions remain crucial. Influence in this form of global private governance is not a function of the economic power of states, but of the ability of domestic standard-setters to provide timely information and speak with a single voice. Büthe and Mattli show how domestic institutions' abilities differ, particularly between the two main standardization players, the United States and Europe.

Human Factors and Ergonomics in Consumer Product Design - Waldemar Karwowski 2011-06-22

Every day we interact with thousands of consumer products. We not only expect them to perform their functions safely, reliably, and efficiently, but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design, from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two-volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process. The first volume, Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques, outlines the how to incorporate Human Factors and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video and other media, and virtual reality applications in consumer product design. It also explores user-centered aspect of consumer product development with discussions of user-centered vs. task-based approach, articulation and assessment of user requirements and needs, interaction with design models, and eco design. With contributions from a team of researchers from 21 countries, the book covers the current state of the art methods and techniques of product ergonomics. It provides an increased knowledge of how to apply the HF/E principles that ultimately leads to better product design.

Advances in Human Factors in Robots and Unmanned Systems - Pamela Savage-Knepshield 2016-08-16

This book focuses on the importance of human factors in the development of reliable and safe unmanned systems. It discusses current challenges such as how to improve perceptual and cognitive abilities of robots, develop suitable synthetic vision systems, cope with degraded reliability of unmanned systems, predict robotic behavior in case of a loss of communication, the vision for future soldier-robot teams, human-agent teaming, real-world implications for human-robot interaction, and approaches to standardize both display and control of technologies across unmanned systems. Based on the AHFE 2016 International Conference on Human Factors in Robots and Unmanned Systems, held on July 27-31, 2016, in Walt Disney World®, Florida, USA, this book is expected to foster new discussion and stimulate new ideas towards the development of more reliable, safer, and functional devices for carrying out automated and concurrent tasks.
