*Processing by Centrifugation* - Liya L. Regel 2001-12-31

This volume constitutes the proceedings of the Fourth International Workshop on Materials Processing at High Gravity, held at Clarkson University, May 29 to June 2, 2000. There were 73 attendees from 16 countries. Since the topics extended well beyond materials processing, it was felt appropriate to name this proceedings "Centrifugal Processing." Processing by Centrifugation includes the traditional bench-scale centrifuges, as well as all rotating systems utilizing the centrifugal and Coriolis forces to provide unique performance. Centrifugation led to the formation of sticky porous Teflon membranes, as well as improved polymeric solar cells. Centrifugation on large equipment improved the chemical vapor deposition of diamond films, influenced the growth and dissolution of semiconductor crystals, and elucidated the influence of gravity on coagulation of colloidal Teflon. A million g centrifuge was constructed and used to study sedimentation in solids and to prepare compositionally graded materials and new phases. Rotation of a pipe about its axis allowed the casting of large-diameter metal alloy pipes as well as coating the interior of pipes with a cermet utilizing self-propagating high-temperature synthesis. Such coatings are highly

corrosion and erosion resistant. Flow on a rotating disk was shown to be useful for process intensification, such as large-scale manufacturing of nano-particles, polymerization reactions, and heat & mass transfer. Several theoretical studies dealt with the influence of rotation on fluid convection on surfaces and in pipes, tubes, and porous media. These have applications to integrated-circuit chip manufacturing, alloy casting, oil production, crystal growth, and the operation of rotating machinery.

*Conceptual Dynamics* - Kirstie Plantenberg 2013-08-19

Conceptual Dynamics is an innovative textbook designed to provide students with a solid understanding of the underlying concepts required to master complex dynamics problems. This textbook uses a variety of problem types including, conceptual, traditional dynamics, computer based and design problems. Use of these diverse problems strengthens students understanding of core concepts and encourages them to become more active in the learning process. Conceptual Dynamics has an extensive companion website (ConceptualDynamics.com) containing interactive quizzes and animations for students. At a net price of only \$55 Conceptual Dynamics is the most affordable dynamics textbook available. Throughout this book, sets of "conceptual" problems are included that are meant to test the understanding of fundamental ideas presented in the text without requiring significant calculation. These problems can be assigned as homework or can be employed in class as exercises that more actively involve the students in lecture. When employed in class, these problems can provide the instructor with real-time feedback on how well the students are grasping the presented material. In order to assist the instructor, PowerPoint lecture slides are provided to accompany the book. Boxes are included throughout the text leaving places where students can record important definitions and the

correct responses to the conceptual questions presented within the PowerPoint slides. In this sense, the book is meant to be used as a tool by which students can come to learn and appreciate the subject of dynamics. Students are further encouraged to be active participants in their learning through activities presented at the end of each chapter. These activities can be performed in class involving the students or as demonstrations, or can be assigned to the students to perform outside of class. These activities help the students build physical intuition for the sometimes abstract theoretical concepts presented in the book and in lecture. Along with the standard dynamics problems that are assigned as part of a student's homework, this book also includes computer based and design problems. The computer based problems in this book require the student to derive the equation of motion and to sometimes solve the resulting differential equation. The computer problems range from problems that may be completed using a spreadsheet to problems that require coding or a specialized software package (such as Mathematica, Maple, or MATLAB/Simulink). Design problems are included in each chapter in order to emphasize the importance of the material for students, as well as to get the students to think about real world considerations. The application of the fundamental subject material to various design problems helps students see the material from a different perspective. It will also help them solidify their understanding of the material. This textbook may be used as a standalone text or in conjunction with on-line lectures and effectively assist an instructor in "inverting the classroom".

**Looking for the Prehispanic Filipino** - William Henry Scott  
1992-06-09

Although we know so much more about Philippine history, than was the case say ten or twenty years ago, the task of reconstructing and reinterpreting it in light of centuries of misinterpretations, distortions and omissions remains a formidable and overwhelming one. To compensate for this horrendous neglect of our history, we need to identify and rectify the imbalances in historical scholarship, to apply the best techniques, use the best perspectives not only of the discipline of history but also those of sister disciplines in the social sciences and humanities as well as access the voluminous historical data in archives and libraries in many parts of the world. It hardly need be stated that there is also a need to re-read the earlier historical presentations for many of them have served only to obscure the real contours of our development as a people. We have reached a stage in our historical development where the rescue of our culture is of utmost importance: we must make any aspect of our culture ever present and easy of access to see its assonance with (or significance in) our present life and to free it from the alienating forces that have prevented its self-appraisal. Obviously, any scholar who engages in the above process would also contribute to the affirmation of the Filipino identity and provide substance to the truism that history can be an instrument of liberation.
